

1. With the design facing down (yellow triangles at the top), fold the sheet in half the long way. Unfold.

2. Fold the top two corners down to line up with the center fold.

3. Now you should be able to see the yellow triangles at the top. Fold the top half down so that the tip comes to about 1 inch above the bottom edge of the page.

4. Again, fold the top two corners down so that they line up with the center fold.

5. There should be a small triangle still showing. Fold that up.

6. Fold the entire plane in half, with the yellow, orange, and blue still facing out.

7. Now fold down the wings, creasing at the line where the blue and orange designs touch.

8. You're ready to fly! Hold your plane just in front of the yellow triangle and gently push the plane forward, releasing it as your arm fully extends!
